Company Representatives at the 23rd World Mining Congress:

Bill Kalogerakis, Account Executive

Lembit Salasoo, Project Leader and Senior Engineer, GE Global Research Centre

Company Profile:

A trusted global player for mining companies, GE offers a broad range of products and services for each step of the mining process. They aim to become a best-in-class supplier of mining products and services, equally emphasizing the well-being of the environment, the development of local communities and the focus on productivity. GE tackles the most important challenges facing the mining industry today through its five-points approach of process innovation, breakthrough technology, integrated solutions, dedicated teams, and global solutions for global needs. Products and solutions for the mining industry include motors, transportation, dust control, water technologies, financing and more.

Product Line(s):

GE Mining will be promoting the following solutions:

Productivity enhancing solutions: GE engineers power conversion solutions for hoists, conveyors, draglines, mills and crushers using high-performance motors, generators and variable-speed drives to improve productivity, efficiency and reliability. GE's Proficy MaxxMine™ Software Solution combines process optimization with predictive analytics allowing mine operators to maximize throughput and improve reliability.

Power generation solutions: GE delivers high-integrity generation and distribution solutions that put reliable power where it's needed with multi-fuel options and flexible customization for every application and location, including remote, corrosive, seismic and high mean sea-level environments.

Water treatment solutions: Innovative solutions in water technology put filtration, treatment, desalination, distribution and control solutions in the hands of mine managers. Systems are available in both stationary and mobile configurations, providing water when and where it's needed. GE also offers on-site field support, remote monitoring and diagnostics, water analysis and system troubleshooting.

Objectives(s) at the 23rd World Mining Congress:

GE Mining will be looking to meet with end users in the mining industry located throughout the world.
